

EDUARDO RICO

Mobile Product Lead Jr | Mobile Engineer (Android, KMP, iOS) | B2B Fintech

7 years building mobile products across fintech, travel, and consumer verticals — from 0 → 1 launches to scaling unicorn-stage apps. 3 years with progressive product ownership and cross-functional leadership: defining roadmaps, driving alignment across engineering, design, and marketing, and connecting mobile outcomes to growth metrics. Deep native engineering foundation across iOS and Android. AI-native practitioner who uses LLMs and automation tools daily to accelerate discovery, synthesis, and delivery.

EXPERIENCE

Freelance / Grupo Valkibah

Mar 2025 – May 2026

Mobile Product Lead & Engineer

Cross-platform product — KMP (Android & iOS)

Owned the full product lifecycle of a cross-platform mobile application for Grupo Valkibah — acting simultaneously as Product Lead and Engineer. Led discovery, roadmap definition, and release strategy while building the app with Kotlin Multiplatform (KMP) and Compose Multiplatform, targeting Android and iOS from a shared codebase.

- Defined and owned the product roadmap across Android and iOS; facilitated discovery sessions, wrote PRDs, and drove sprint planning with a cross-functional squad of designers, backend developers, and marketing stakeholders
- Led collaboration with the UX/UI designer and marketing team to align in-app messaging strategy, onboarding flows, and push notification campaigns tied to activation and retention goals
- Partnered with the Product Owner to translate business requirements into mobile-native user stories; maintained the backlog and enforced scope discipline through sprint ceremonies
- Architected the app with KMP sharing domain, data, and networking layers (Ktor Client, Coroutines, Flow); built cross-platform UI with Compose Multiplatform — single codebase targeting Android and iOS without compromising native UX
- Integrated Firebase Remote Config for feature flagging and A/B testing; Firebase Analytics with custom funnels and Firebase Cloud Messaging for targeted push notification campaigns
- Used Claude and ChatGPT to synthesize qualitative user feedback from interviews and support tickets into actionable insight clusters, accelerating discovery cycles
- Leveraged AI-assisted prototyping (Framer AI concepts, LLM-generated wireframe briefs) to validate UX hypotheses before engineering investment
- Managed Play Store and App Store release cycles: staged rollouts, release notes, ASO metadata, and coordinated backend API versioning

TickerPlus (Freelance)

Aug 2025 – Mar 2026

Mobile Engineer — Kotlin Multiplatform

KMP app — Android & Desktop

Real-time stock market tracker built from scratch with Kotlin Multiplatform, targeting Android and Desktop simultaneously, powered by the Polygon.io WebSocket API. Designed from day one as a production-ready, scalable architecture — not a prototype — with a full shared domain, data, and networking layer and zero platform-specific duplication.

- Architected a full KMP solution with a strict separation of shared layers (domain, data, networking) and platform-specific layers (Android UI, Desktop UI) using Ktor Client, Coroutines, and Flow — eliminating duplication and reducing future iOS porting effort to UI-only work
- Implemented real-time WebSocket streaming with Polygon.io: full connection lifecycle management, exponential backoff reconnection strategy, and debounce logic to suppress unnecessary UI recompositions under high-frequency tick updates
- Built reactive in-memory caching with debouncing and resilient fallback strategies; leveraged advanced Kotlin Flow operators — combine, flatMapLatest, zip, SharingStarted.WhileSubscribed — and Channels for one-shot UI events
- Designed composable UI with Jetpack Compose including Compose Canvas for fully custom financial candlestick and line charts, Lottie animations, Shimmer skeleton loading screens, and Glance Widgets for live home-screen ticker data
- Applied Mutex for shared-state concurrency control across multiple simultaneous WebSocket streams; designed thread-safe update pipelines that handle bursts of market data without race conditions or dropped frames

- Integrated Firebase Remote Config for runtime feature flagging and kill-switch control; built Analytics instrumentation with custom funnels tracking user engagement with specific tickers and chart interactions
- Structured multi-module architecture (app / core / feature_*) following Clean Architecture principles with clear dependency rules, enabling independent feature development and future team scalability
- Used Claude and ChatGPT as architectural thinking partners — for trade-off analysis on shared vs platform-specific state management, reviewing WebSocket reconnection strategies, and generating test scaffolding

Stori Card

Oct 2022 – Mar 2025

Senior Android Engineer & Product Co-Owner

Fintech unicorn · \$1.2B valuation · user base grew from 2M to 3.7M

Core contributor to Cuenta+ and Inversion+, two of Stori's flagship products. Held deep technical ownership while operating as a de facto product co-owner: defining features, tracking mobile KPIs, contributing to roadmap discussions, and mentoring the Android squad.

- Contributed to Cuenta+ launch that reached \$40M MXN in deposits within the first weeks — owned the mobile experience end-to-end from scoping through release, including App Store submission, staged rollouts, and force-upgrade strategy
- Defined and tracked mobile-specific KPIs including crash-free session rate (maintained at 98.7%), retention cohorts, and custom analytics funnels in Firebase and Amplitude — surfacing insights that directly shaped roadmap priorities
- Took product and technical ownership of the Android squad for Cuenta+ and Inversion+: drove architecture decisions, led sprint ceremonies, maintained backlog, and enforced delivery predictability
- Represented the voice of the mobile user in product discussions — synthesized support ticket data, interview notes, and behavioral analytics into roadmap decisions
- Implemented Firebase Remote Config for A/B testing; built comprehensive Analytics instrumentation with custom funnels and retention cohorts, enabling data-informed product decisions
- Leveraged AI agents (Claude, Gemini, ChatGPT) to streamline code generation, architectural analysis, and test coverage — accelerating delivery while maintaining quality
- Led technical interviews for Android candidates and mentored engineers on architecture, Compose state management, and testing; facilitated internal tech talks on KMP adoption

Globant — Citibanamex

Jul 2020 – Oct 2022

Android Engineer (Mid)

Native Android · one of Mexico's largest banking apps

- Built and maintained scalable Kotlin features across account summary, transfers, and payments modules using MVVM / Clean Architecture and SOLID principles
- Drove Jetpack Compose adoption for new UI components — established patterns for state management, theming, and navigation that accelerated feature delivery
- Integrated Firebase Analytics and Crashlytics for real-time crash monitoring and behavioral tracking; contributed data-driven insights to prioritization discussions
- Applied GitFlow with CI/CD pipelines (GitHub Actions) and Agile/Scrum ceremonies, improving delivery predictability and reducing production defect escape rate

Umvel

Apr 2019 – Jul 2020

Junior Android & iOS Developer

Agency — VivaAerobus, OEIO, PickPal · Travel, Logistics, Consumer

- Developed core features for VivaAerobus — flight search, booking flows, seat selection, and mobile check-in — across Android (Kotlin/MVVM) and iOS (Swift/UIKit)
- Built iOS features using Swift and UIKit following MVC architecture; integrated REST APIs via URLSession and Alamofire; managed dependencies with CocoaPods and handled App Store submission process
- Integrated AWS S3, SNS, and GCP APIs for real-time location tracking and geofence-based triggers in the OEIO logistics product on both platforms

PRODUCT LEADERSHIP & MANAGEMENT

Roadmap & Discovery	Release & Growth
Mobile Roadmap Ownership ~2 yrs 0 → 1 product definition · Feature prioritization · Opportunity sizing · Quarterly planning · Stakeholder alignment Discovery & Research ~2 yrs User interviews synthesis · Support ticket analysis · Behavioral data interpretation · Jobs-to-be-done framework · Hypothesis-driven design Spec Writing & Documentation ~2 yrs PRDs & user stories · Acceptance criteria · Decision logs · Async written communication · Technical spec collaboration Sprint & Backlog Management ~2 yrs Sprint facilitation · Backlog grooming · Scope discipline · Delivery predictability · Agile / Scrum / Kanban	App Store / Play Store Releases App Store Connect · Google Play Console · Staged rollouts · Release notes · Force-upgrade strategy · ASO metadata basics Mobile KPIs & Analytics ~2 yrs DAU/MAU · Crash-free session rate · Retention curves · Push notification engagement · Custom funnels · A/B testing (Firebase Remote Config) Push & In-App Messaging ~2 yrs FCM push strategy · In-app messaging · Activation & retention campaigns · Braze (awareness) · Notification segmentation Cross-functional Leadership ~2 yrs Engineering alignment · Design partnership · Marketing collaboration · Data & business stakeholders · Bilingual communication (ES/EN)

AI-AUGMENTED PRACTICE

User Research & Synthesis	UX Prototyping & Ideation
LLM feedback synthesis (Claude, ChatGPT) · Interview & survey processing at scale · Support data clustering · Actionable insight generation · Qualitative → quantitative translation	Framer AI · Galileo AI (concepts) · Uizard (awareness) · LLM-generated wireframe briefs · UX hypothesis validation before engineering investment
Technical Participation	Workflow & Analytical Acceleration
GitHub Copilot · Cursor · Claude for architecture reviews · AI-assisted code generation · Reducing engineering round-trips · Feasibility exploration via LLMs	n8n / Make (workflow automation awareness) · AI-accelerated data analysis · Pattern identification in usage data · Structured document drafting via AI · Prompt engineering for product workflows

TECHNICAL SKILLS

Android (Senior · 6+ yrs)	
Core Kotlin · Jetpack Compose · Material 3 · XML Views / ViewBinding · DataBinding · Custom Views · Compose Canvas (charts) Architecture & Patterns Clean Architecture · MVVM · MVI / UDF · Repository pattern · SOLID Principles · Modular multi-module · Offline-first Async & Reactive Coroutines · Flow / StateFlow · Channels (one-shot events) · combine / flatMapLatest / zip · SharingStarted.WhileSubscribed · WorkManager Platform APIs CameraX · ML Kit (OCR, barcode) · Biometric API · FCM · Broadcast Receivers · Services & Intents · Glance Widgets · Adaptive Layouts / Dark Mode Animations & Media Compose Animations · Lottie (JSON animations) · Shimmer skeleton screens · Coil / Glide	DI & Build Dagger Hilt · Koin · KSP · Gradle Kotlin DSL · Version Catalogs · Composite Builds · AAB + Dynamic Delivery Persistence & Network Room · DataStore (Proto & Prefs) · SharedPreferences · Retrofit · Ktor Client · OkHttp interceptors · Paging 3 Quality & Tooling JUnit · MockK / Mockito · Turbine · Espresso · Compose Testing API · MockWebServer · LeakCanary · Flipper · Detekt / Ktlint · Baseline Profiles · Proguard / R8 Release Play Store staged rollouts · Firebase App Distribution · Semantic versioning · Android Lint

Kotlin Multiplatform (KMP) (Mid · 2 yrs)

Shared Layers

KMP shared domain / data / presentation · Ktor Client (shared networking) · Coroutines (shared async) · Flow / StateFlow cross-platform · SQLDelight (KMP persistence) · Kotlin Serialization

Architecture & Build

Compose Multiplatform · Multi-module (app / core / feature_*) · Koin (KMP-compatible DI) · Gradle Kotlin DSL · Version Catalogs · KMP-ready architecture scalable to iOS

Advanced Patterns

WebSocket streaming with lifecycle management · Exponential backoff reconnection · Advanced Flow operators · Channels for one-shot events · Mutex for concurrency control

Build & Delivery

Composite Builds · Multi-module architecture (app / core / feature_*) · Exponential backoff reconnection strategies

iOS (Mid · ~2.5 yrs)

Core

Swift · SwiftUI · UIKit · Auto Layout & Storyboards · MVC / MVVM on iOS

Networking & Storage

URLSession · Alamofire · CocoaPods · UserDefaults · Core Data (awareness)

Platform & Release

App Store submission process · APNs / FCM push notifications · Xcode build configurations · Background/foreground lifecycle · iOS platform-specific adjustments

React Native (Junior · ~1 yr)

Core

React Native (Android & iOS) · TypeScript / JavaScript · React Navigation (stack, tab, drawer) · React Hooks · Component-based architecture

Platform & Tooling

REST API integration (fetch / axios) · AsyncStorage · FCM push notifications in RN · Android & iOS platform-specific adjustments · Expo & bare workflow awareness · StyleSheet API & responsive layouts

Firebase & Cloud

Firebase

Firebase Auth · Firestore · Firebase Remote Config (feature flags & A/B) · Firebase Analytics (custom events & funnels) · Firebase Crashlytics · Firebase App Distribution · ML Kit (OCR, barcode, document recognition)

Cloud & Other

AWS S3 (media upload/download) · AWS SNS (push delivery) · GCP API integration · Braze (mobile engagement) · GitHub Actions CI/CD · Bitrise · Play Store staged rollouts · Semantic versioning

EDUCATION

Master's Degree — Information & Communication Technologies

IEXE University
2022 – 2024

Bachelor's Degree — Information & Communication Technologies

UTNG
2015 – 2019

CERTIFICATIONS & COMMUNITY

- Mobile App Product Management — UXCam Academy
- Digital Product Management — Alison
- Product Management Fundamentals — Great Learning
- Agile Product Management — Great Learning
- Scrum Master Professional Certified — CertiProf
- App Development Certificate & Cloud Computing Fundamentals — Google
- iOS Development with Swift 4 & 5 | Flutter Development | React Native — Udemy
- Speaker at mobile development conferences: UTNG, NSCoder México, Globant
- Mentor and instructor: guided junior developers and university students in Android development, Clean Architecture, and Agile methodologies
